

Saving Water . . . Vado makes it easy

The H2ECO range by VADO offers reduced flow rates without hampering performance. Code for sustainable homes (CFSH) is used as a guide by planning authorities to grant planning permission for new developments. The H2ECO range regulates basin mixers to 2/litres min, showers to 6litres/min and sink mixers to 5 litres/min, all frequently used to achieve level 3-4 code for sustainable homes.

All the products come with 12 year guarantee, WRAS approval and a choice of standard or ¼" turn ceramic disc valves.
